

Custom Molded Foam

Forward Thinking - The key to new processes

YOU NEED PROTECTION!

When it comes to packaging, at Central Package & Display we offer the widest choice of possible solutions, assuring you of the best form, fit and function your product deserves

We have recently expanded the limits of what engineered, cushioned packaging can do for you

Pre-molded foam structures offer an engineered packaging system designed to fit like a glove, at an affordable cost of entry even in the low to mid quantity levels

Utilizing state of the art engineering design, we'll produce custom formed components, molded from a new generation of cushioning foams created using our in-house I-Mold system by Sealed Air

■ *A fantastic option when it's important for the packaging material to conform to complex shapes*

■ *A cost effective alternative to fabricated foam assemblies which can have a higher cost of assembly labor per dollar of protection*

Custom Molded Foam joins our well established arsenal of weapons in the battle to keep your products safe

- o Fabricated Resilient foams
- o Suspension Packaging Systems
- o All-Corrugated designs— 100% Sustainability
- o Fluted Plastic - well suited to material handling applications
